1. General Description

The specification is a transmissive type color active matrix liquid crystal display (LCD) which uses amorphous thin film transistor (TFT) as switching devices. This product is composed of a TFT-LCD panel, driver Ics and a backlight unit.

Note 1: If Ta below 50ºC, the maximal humidity is 90%RH, if Ta over 50ºC, absolute humidity should be less than 60%RH.

Note 2: The response time will be extremely slow when the operating temperature is around -10ºC, and the back ground will become darker at high temperature operating.

Note 1: Be sure to apply VCC and VGL to the LCD first, and then apply VGH.
Note 2: VCC setting should match the signal output voltage (refer to Note 3) of customer’s system board.
Note 3: Typical Vcom is only a reference value, it must be optimized according to each LCM.
Note 4: DCLK, HS, VS, RSTB, UPDN, STL, RSTB, MODE, DITHB.

#### 6.2.1. Normally Black Type (Negative)

![Diagram of response time](attachment:diagram.png)

Tr is the time it takes to change form non-selected state with relative luminance 10% to selected state with relative luminance 90%;

TF is the time it takes to change from selected state with relative luminance 90% to non-selected state with relative luminance 10%.

Note: Measuring machine: LCD-5100
6.2.2. Normally White Type (Positive)

![Diagram of Relative Brightness and Times](image)

Tr is the time it takes to change from non-selected state with relative luminance 90% to selected state with relative luminance 10%;
Tf is the time it takes to change from selected state with relative luminance 10% to non-selected state with relative luminance 90%;
Note: Measuring machine: LCD-5100 or EQUI

6.3. Definition of Contrast Ratio

Contrast is measured perpendicular to display surface in reflective and transmissive mode. The measurement condition is:

<table>

</tr>
</tbody>
</table>

Definitions: CR (Contrast) = Luminance of White Pixel / Luminance of Black Pixel

6.4. Definition of Viewing Angles

![Diagram of Viewing Angles](image)

Measuring machine: LCD-5100 or EQUI

6.5. Definition of Color Appearance

R, G, B and W are defined by (x, y) on the IE chromaticity diagram
6.6. Definition of Surface Luminance, Uniformity and Transmittance

Using the transmissive mode measurement approach, measure the white screen luminance of the display panel and backlight.

6.6.1. Surface Luminance: \( L_V = \text{average (}L_{P1}:L_{P9}\text{)} \)

6.6.2. Uniformity = Minimal \( (L_{P1}:L_{P9}) \) / Maximal \( (L_{P1}:L_{P9}) \) * 100%

6.6.3. Transmittance = \( L_V \) on LCD / \( L_V \) on Backlight * 100%

Note: Measuring machine: BM-7

11. Quality Assurance

11.1 Purpose
This standard for Quality Assurance assures the quality of LCD module products supplied to customer.

11.2 Standard for Quality Test
11.2.1 Sampling Plan:
   GB2828.1-2012
   Single sampling, general inspection level II
11.2.2 Sampling Criteria:
   Visual inspection: AQL 1.5%
   Electrical functional: AQL 0.65%
11.2.3 Reliability Test:
   Detailed requirement refer to Reliability Test Specification.

11.3 Nonconforming Analysis & Disposition
11.3.1 Nonconforming analysis:
   11.3.1.1 Customer should provide overall information of non-conforming sample for their complaints.
   11.3.1.2 After receipt of detailed information from customer, the analysis of nonconforming parts usually should be finished in one week.
   11.3.1.3 If can not finish the analysis on time, customer will be notified with the progress status.
11.3.2 Disposition of nonconforming:
   11.3.2.1 Non-conforming product over PPM level will be replaced.
   11.3.2.2 The cause of non-conformance will be analyzed. Corrective action will be discussed and implemented.

11.4 Agreement Items
Shall negotiate with customer if the following situation occurs:
11.4.1 There is any discrepancy in standard of quality assurance.
11.4.2 Additional requirement to be added in product specification.
11.4.3 Any other special problem.

11.5 Standard of the Product Visual Inspection
11.5.1 Appearance inspection:
   11.5.1.1 The inspection must be under illumination about 1000 – 1500 lx, and the distance of view must be at 30cm ± 2cm.
   11.5.1.2 The viewing angle should be 45° from the vertical line without reflection light or follows customer's viewing angle specifications.
   11.5.1.3 Definition of area: A Zone: Active Area, B Zone: Viewing Area,
11.5.2 Basic principle:

11.5.2.1 A set of sample to indicate the limit of acceptable quality level must be discussed by both us and customer when there is any dispute happened.

11.5.2.2 New item must be added on time when it is necessary.

$W > 0.10$ is unacceptable.

15 PCB  
15.1 No distortion or contamination on PCB terminals.  
15.2 All components on PCB must same as documented on the BOM/component layout.  
15.3 Follow IPC-A-600F.

16 Soldering  
Follow IPC-A-610C standard
The below defects must be rejected.

17.1 Missing vertical / horizontal segment,
17.2 Abnormal Display.
17.3 No function or no display.
17.4 Current exceeds product specifications.
17.5 LCD viewing angle defect.
17.6 No Backlight.
17.7 Dark Backlight.
17.8 Touch Panel no function.

Remark: LCD Panel Broken shall be rejected. Defect out of LCD viewing area is acceptable.

11.7 Classification of Defects

11.7.1 Visual defects (Except no / wrong label) are treated as minor defect and electrical defect is major.
11.7.2 Two minor defects are equal to one major in lot sampling inspection.

11.8 Identification/marking criteria

Any unit with illegible / wrong /double or no marking/ label shall be rejected.

11.9 Packing

11.9.1 There should be no damage of the outside carton box, each packaging box should have one identical label.
11.9.2 Modules inside package box should have compliant mark.
11.9.3 All direct package materials shall offer ESD protection

Note1: Bright dot is defined as the defective area of the dot is larger than 50% of one sub-pixelarea.

Bright dot: The bright dot size defect at black display pattern. It can be recognized by 2% transparency of filter when the distance between eyes and panel is \(350 \pm 50\) mm.

Dark dot: Cyan, Magenta or Yellow dot size defect at white display pattern. It can be recognized by 5% transparency of filter when the distance between eyes and panel is \(350 \pm 50\) mm.

Note2: Mura on display which appears darker / brighter against background brightness on parts of display area.

13. Precautions and Warranty

13.1. Safety

13.1.1 The liquid crystal in the LCD is poisonous. Do not put it in your mouth. If the liquid crystal touches your skin or clothes, wash it off immediately using soap and water.

13.1.2 Since the liquid crystal cells are made of glass, do not apply strong impact on them. Handle with care.

13.2. Handling

13.2.1 Reverse and use within ratings in order to keep performance and prevent damage.

13.2.2 Do not wipe the polarizer with dry cloth, as it might cause scratch. If the surface of the LCD needs to be cleaned, wipe it swiftly with cotton or other soft cloth soaked with petroleum IPA, do not use other chemicals.

13.3. Storage

13.3.1 Do not store the LCD module beyond the specified temperature ranges.

13.3.2 Strong light exposure causes degradation of polarizer and color filter

13.4. Metal Pin (Apply to Products with Metal Pins)

13.4.1 Pins of LCD and Backlight

13.4.1.1 Solder tip can touch and press on the tip of Pin LEAD during the soldering

13.4.1.2 Recommended Soldering Conditions

Solder Type: Sn96.3~94-Ag3.3~4.3-Cu 0.4~1.1

Maximum Solder Temperature: 370°C

Maximum Solder Time: 3s at the maximum temperature

Recommended Soldering Temp: 350±20°C

Typical Soldering Time: ≤3s

13.4.1.3 Solder Wetting

</table>

13.4.2 Pins of EL

13.4.2.1 Solder tip can touch and press on the tip of EL leads during soldering.

13.4.2.2 No Solder Paste on the soldering pad on the motherboard is recommended.

13.4.2.3 Recommended Soldering Conditions

Solder type: Nippon Alimit Leadfree SR-34, size 0.5mm

Recommended Solder Temperature: 270~290°C

Typical Soldering Time: ≤2s

Minimum solder distance from EL lamp (body): 2.0mm

13.4.2.4 No horizontal press on the EL leads during soldering.

13.4.2.4 180° bend EL leads three times is not allowed.

13.5. Operation

13.5.1. Do not drive LCD with DC voltage
13.5.2. Response time will increase below lower temperature
13.5.3. Display may change color with different temperature
13.5.4. Mechanical disturbance during operation, such as pressing on the display area, may cause the segments to appear “fractured”.
13.5.5. Do not connect or disconnect the LCM to or from the system when power is on.
13.5.6. Never use the LCM under abnormal condition of high temperature and high humidity.
13.5.7. Module has high frequency circuits. Sufficient suppression to the electromagnetic interface shall be done by system manufacturers. Grounding and shielding methods may be important to minimize the interference.
13.5.8. Do not display the fixed pattern for long time (we suggest the time not longer than one hour) because it may develop image sticking due to the TFT structure.

13.6. Static Electricity

13.6.1. CMOS LSIs are equipped in this unit, so care must be taken to avoid the electro-static charge, by ground human body, etc.
13.6.2. The normal static prevention measures should be observed for work clothes and benches.
13.6.3. The module should be kept into anti-static bags or other containers resistant to static for storage.

13.7. Limited Warranty

13.7.1. Our warranty liability is limited to repair and/or replacement. We will not be responsible for any consequential loss.
13.7.2. If possible, we suggest customer to use up all modules in six months. If the module storage time over twelve months, we suggest that recheck it before the module be used.
13.7.3. After the product shipped, any product quality issues must be feedback within three months, otherwise, we will not be responsible for the subsequent or consequential events.
14. Packaging
